Figure S1. Associations between NCAPH expression and tumor immune infiltration, somatic copy number alterations (SCNA). (A) Associations between NCAPH expression and tumor immune infiltration. (B) Kaplan-Meier plots for tumor infiltrating immune cells (TIICs) and NCAPH expression in pan-cancer. (C) Associations between NCAPH expression and SCNA.
Figure S2. Associations between NCAPH expression and tumor microenvironment in pan-cancer. In Spearman’s method, NCAPH mRNA expression was positively or negatively correlated with estimate-score, immune-score and stromal-score in different types of tumors.
Figure S3. Association between NCAPH expression level and immune markers in ACC, COAD, LUAD based on TIMER2.
